

Lab-11 12-12-2024

TOTAL MARKS: 60

Task 01: Create a new tablespace `Lab_11_tbs1`. Create a copy of the datafile(s) manually to another location.

Task 02: Delete the datafile(s) manually from the original location.

Task 03: Perform complete recovery step by step for tablespace in NOARCHIVELOG mode. Restore the datafile(s) associated with the tablespace from the backup created in **Task 1**.

Task 04: Repeat **Tasks 1 & 2** with the name `Lab_11_tbs2`. Now perform complete recovery step by step for tablespace in ARCHIVELOG Mode. Restore only the lost datafile from the backup. (Use SQL to ensure the database is in ARCHIVELOG mode).

Task 05: Repeat **Tasks 1** with the name `Lab_11_tbs2`. Use the SQL command to update the control file with the new location. Write commands to restore original datafile(s) to a new Location for tablespace. Perform recovery on the relocated datafile(s) using the SQL **RECOVER** command.

Task06: Create a new tablespace `Lab_11_tbs4`. Now repeat Task 02 without creating a copy of datafile(s). Write commands to re-create the missing datafile(s) and perform recovery using archived redo log files to bring the datafile up to date.
